# Render

Instant and actionable insights that drive better project outcomes

Success and efficient delivery of today's infrastructure depends on all stakeholders having the right information at the right time – then acting on that insight quickly and effectively. Render Insights delivers interactive visualizations and easy-to-understand dashboards powered by rich, geospatial construction and operations data to enable faster, more informed project decisions.

Built-in performance insights

Identify contractor or crew performance trends, completion timelines or labor and material utilization to assess project risk and proactively keep teams moving.

Identify delivery trends and insights, fast

Powerful, interactive visualizations that bring both data and insights to life in easy-to-understand, configurable dashboards.

Powered by rich, geospatial data

Increase the value of Render's rich, real-time labor, material, construction and scheduling data - and your third-party system data - eliminating the need for manual updates and disparate analytics tools.
